

## Why choose 5 Rings for WordPress Hosting, Maintenance & Security

**Speedy Hosting** - There are several reasons a visitor may click away from your website, but one of the key reasons is a slow loading website. Ensuring your site is hosted on dependable, quick hosting can be the difference between keeping a customer and losing them. Not only that, but Google now deem that loading speed is a ranking factor towards your site's SEO.

**Rock Solid Security** - Everyone needs security these days, from online banking, office buildings to mobile phones. You've no doubt read the horror stories on the news or online about sites that have been compromised – this is a very real danger and happens regularly. Our maintenance plans keep you as secure as possible and in the very unlikely event of a security breach, we'll investigate, remedy and recommend any further protection.

**Keeping Your Site Updated** - As security changes, so do the plugins and themes that power your Wordpress site. These themes and plugins need updating regularly to ensure they not only work properly for your site, but also do not pose a security risk (those pesky hackers). Our plans ensure your plugins and themes are kept up to date, and we'll give you a shout if there are any issues.

**Regular Backups** - If you have a website, it is important that you have a regular backup service – if your website were to go down or be compromised, or you make a mistake when editing, a backup of the site can save you lots of time and money. Our plans offer a range of backup frequencies that suit you and your website.

**Peace of Mind** - Our plans are there to ensure that your website is one area of the business that you don't have to worry about! If you are the worrying kind, then we are on hand to reassure you that all is well and that it is in safe hands. We'll deal with the website, so you can concentrate on your business.

**Dealing with Humans!** When your site is updated, or when you are contacting us for updates to your site, you can be certain that you will be speaking to humans – not outsourced support or an automated service. Real humans that you can rely on to respond to your requests and questions in the right way for your business and your website.
